languages

Italian: mother tongue
English: fluent
French: conversational
Spanish: conversational

skills

AI / ML: Claude Code, Metamate, MCP, RAG, Embeddings, LLM APIs, Prompt Engineering, Agent Design, Evals
Databases: SQL, MySQL, ZippyDB, Couchbase, TAO
RPC & Streaming: Thrift, gRPC, Apache Kafka
Cloud / Build: AWS, GCP, Buck
Security: Threat Modeling, MITRE ATT&CK, Detection Engineering
Languages: Java, Python, Hack/PHP, Rust, C/C++, Bash
Tools: GitHub, Perforce, Docker, Consul, Nomad

interests

Professional
Distributed Systems
Databases
Cybersecurity

Personal
tennis
music
vinyls
cooking
photography
traveling

education

Master of Computer Engineering — Napoli, Italy | Oct 2015
Università degli Studi di Napoli Federico II
Final Grade: *110/110*

work experience

Meta — London, UK
- **Staff Software Engineer, Security** — Feb 2026–Present
- **Senior Software Engineer, Security** — Jul 2022–Feb 2026
- **Senior Software Engineer, Core Data** — Sep 2020–Jul 2022

Security: Built and scaled Meta's Security Knowledge Graph (millions of entities and edges) — powering risk and threat enumeration/prioritization, the Security org's topline metrics, and AI agents automating breach-and-attack simulations and detection/investigation/response. Adopted by Offensive, Defensive, Intel, Insider Trust, Detection Engineering, and Security leadership.

- grew the team from a single IC to 4 ICs and a Product Owner; own strategic planning and team roadmap
- AI Champion for the Security organization — driving AI Fluency and knowledge sharing

Core Data: Database Engineering team, responsible for fleet management of datastores at Meta.

- built a unifying control plane for MySQL and ZippyDB, orchestrating instance placements across the fleet to ensure reliability and availability
- contributed to the maintenance of one of the biggest MySQL infrastructures on earth (over 1M nodes and 25 DCs)

Across both teams: interviewed over 200 candidates and mentored engineers of all levels.

Vonage — London, UK
- **Software Engineer III** — Dec 2018–Aug 2020
- **Software Engineer II** — Dec 2016–Dec 2018

Backend engineering on a Cloud Communication Platform — high availability, replication, and migration.

- built a Change Data Capture tool performing MySQL Binlog Mining for Primary-Secondary replication, change notifications and materialized view generation
- led database migrations
- extracted microservices from a complex monolithic application
- diagnosed and fixed performance bottlenecks caused by low-cardinality AWS DynamoDB indexes
- built a new Database Engineering team of 4 ICs
- mentored junior team members and took part in many hiring processes

Software Engineer *EidosMedia* — Milan, Italy | Dec 2015–Oct 2016
Developed a software layer to expose the core functionalities of the backend of a Digital Content Publishing Platform via RESTful APIs.

- developed new RESTful APIs
- developed algorithms to manage the internal document model of the platform

Research & Development Intern *NEC Laboratories Europe* — Heidelberg, Germany | Jan–Jun 2015
Built a Java module implementing a resource efficient sensor allocation algorithm for geographic range queries to be integrated in the IoT Broker GE.

- carried out most of the scientific research to find an algorithmic solution for the problem
- implemented the chosen algorithm in Java and a JavaFX-based simulation environment

extra curricular activities

Extensible Autonomous Transactions in the World of Microservices *Conference Talks* — Berlin, DE | Oct–Nov 2019
Presented at ApacheCon Europe 2019 and O'Reilly Software Architecture Conference.
